MOHD AZIM I

Entry Level Software Engineer | Java | Backend Development | B.Tech CSE 2025

Chennai, India • mohdazimi083@gmail.com • +91 9894348856 • LinkedIn • GitHub • HackerRank

PROFESSIONAL SUMMARY

Entry-level Software Engineer (B.Tech CSE, 2025) with strong fundamentals in Java, SQL, and software development life cycle (SDLC). Hands-on experience through academic and project-based work in building application logic, working with databases, and developing web interfaces. Comfortable working in Agile team environments and eager to learn across technology domains within a consulting-led delivery mode

TECHNICAL SKILLS

Core Languages: Java (OOP, Collections, Exception Handling), Python, JavaScript (ES6), SQL

Backend & APIs: RESTful APIs, Spring Boot (Foundational – active training), MySQL (Schema Design, Joins)

Frontend: HTML5, CSS3, JavaScript, DOM Manipulation, React (Foundational)

Tools & DevOps: Git, GitHub, CI/CD Fundamentals, Linux (Basic), Issue Tracking

SE Concepts: OOP, Data Structures & Algorithms, SDLC, Debugging, Performance Optimization

Emerging Tech: n8n Workflow Automation, API Integrations, Generative AI, AI Agents

EDUCATION

B.Tech – Computer Science and Engineering | CGPA: 8.0 / 10

Hindustan Institute of Technology and Science (HITS), Chennai | Aug 2021 – Apr 2025

HSC (12th) – Computer Science | 78% | Bharathi Matriculation Higher Secondary School | May 2021

PROFESSIONAL TRAINING & CERTIFICATIONS

Full Stack Java Development (Ongoing) | QSpiders Institute,Chennai

- Structured industry training in Core Java, advanced SQL, Spring Boot, and enterprise application development concepts.

Additional Certifications:

- Gemini Certified University Student — Google (Dec 2025)
- Generative AI Mastermind Bootcamp — OutSkill (Sep 2025)

PROJECTS & TECHNICAL EXPERIENCE

Real-Time Sign Language to Sentence Translation | *AI/ML | Final Year Project | Published: ICAMA 2025*

- Designed and implemented a real-time gesture-to-text pipeline using MediaPipe and LSTM, processing live video streams with consistent sub-second inference latency.
- Optimized inference workflow efficiency, reducing frame drop rate by 30% and stabilizing real-time predictions under continuous high-load input.
- Improved model translation accuracy by 18% through iterative dataset refinement, feature normalization, and model tuning.
- Authored complete technical documentation covering architecture, model design, and experimental results; presented findings at the ICAMA 2025 international conference.

Tech Stack: *Python, TensorFlow, LSTM, MediaPipe Holistic, OpenCV — Self-collected Dataset*

Smart Car Parking System | *IoT + Embedded Systems + Web Interface*

- Architected and delivered an end-to-end IoT parking management solution integrating embedded Arduino sensors with a real-time web dashboard, reducing manual slot tracking by 80%.
- Achieved near real-time slot status synchronization across sensor-to-UI pipeline, improving operational reliability for continuous 24/7 deployment.

- Diagnosed and resolved critical hardware-software integration failures, reducing false sensor readings and improving overall system accuracy.

Tech Stack: *Embedded C++, Arduino UNO, IR Sensors, LCD, Servo Motor, Web Interface*

E-Commerce Frontend Web Application | *Personal Project | Live Deployment* Live Demo

- Built a responsive, multi-page e-commerce web application following clean development practices including component modularization and cross-browser compatibility validation.
- Deployed the application publicly, validating performance and responsiveness across multiple devices and browsers — simulating a production release workflow.
- Enhanced usability by refactoring client-side JavaScript, resolving navigation issues, and implementing robust input validation.

Tech Stack: *HTML5, CSS3, JavaScript (ES6)*

Open to Relocation: Chennai • Bengaluru • Hyderabad • Pune • Noida • Gurugram • Kochi • Mumbai
